

SHIVA SETH

shivaset2@gmail.com | shiva66.xyz | github.com/Shiva953 | x.com/Neutron975

Full-Stack Solana Engineer · Blockchain Developer · OSS Contributor · Superteam India Member

WORK EXPERIENCE

Product Engineering & Protocol Dev · [GlympseDotFun](#)

Aug 2025 – Nov 2025

- Built product features and Solana protocol-level integrations for GlympseDotFun.
- Worked directly on Solana smart contract architecture and on-chain game mechanics.

Software Developer · [Send Arcade](#)

Feb 2025 – April 2025

- Engineered on-chain games including Wordle, Chess, and The Squad Game on the Solana blockchain.
- Developed Solana programs for core game functionality: fee deposits, token swaps, and game logic.
- Implemented smart contract integrations using the Anchor framework and Rust programming language.

Member – India Chapter · [Superteam](#)

Jan 2025 – Present

- Contribute to the Solana ecosystem and provide technical expertise to help members win bounties.
- Received a \$3,000 grant from the Solana Foundation for developing Belzin, an AI-Agent Powered P2P Group Chat Betting platform.

Freelance Solana Developer · [Superteam Earn & Gibwork](#)

Jul 2024 – Present

- Secured numerous gigs through X (formerly Twitter) and platforms like Superteam Earn and Gibwork.
- Developed custom Solana smart contracts and dApps for various clients using Rust, Anchor, and TypeScript.
- Indexed and streamed Solana on-chain data using Helius gRPC and RPC APIs; built data pipelines for real-time account and transaction monitoring.

PROJECTS

Gorclash — gorclash.fun | [github](#)

2025

- Mini multiplayer arcade-style game built on Gorbagana, a Solana L2. Developed game logic, on-chain state, and real-time multiplayer infrastructure.

Belzin — belzin.fun | [github](#)

2025

- AI-Agent Powered P2P Group Chat Betting platform built with the Solana Agent Kit. Received a \$3,000 grant from the Solana Foundation.
- Uses Langchain for agent interactions, Solana Actions & Blinks for the bet interface, and a custom betting program for core logic.
- Chat functionality with NextJS + Pusher; NextAuth + Solana Wallet Adapter for sign-in; Anchor & Rust for contracts; NodeJS + Postgres backend.

Univault — github.com/Shiva953/univault

2024

- All-in-one Squads multisig management blink built using Solana Blinks and Actions. Won the Squads Track at Blinkathon (\$1,200 prize).

TraderDraft — [github](#)

2025

- Next.js platform turning real Solana KOL trading performance into a competitive game; scrapes top wallets, mints an SPL token per KOL via a custom Anchor program, and runs biweekly PnL-based competitions.

- Built with Next.js, Prisma and Postgres, and Solana Web3.js & Anchor; integrates Meteora DAMMv2 liquidity pools, Playwright/Cheerio scraping, and Privy auth.

BountyExchange — [github](#)

2026

- Performance-based USDC bounty platform for Solana trading volume; sponsors escrow rewards against a trader wallet, paid out on-chain once volume and hold targets are met.
- Anchor program with USDC escrow, Helius swap tracking, and automated on-chain finalization.

OSS Contributions — [github.com/Shiva953](#)

2024-25

- Merged PRs in open-source Solana repositories including the official Anchor framework repo.

WINS & ACHIEVEMENTS

- Hackathon Wins: Won 4 hackathons, including Blinkathon (\$1,200 prize) by the SendFun team — Won the Squads Track with Univault.
- Solana Foundation Grant: Received a \$3,000 grant for developing Belzin, an innovative blockchain betting platform.
- Solana Community Presence: Participated in numerous IRL Solana events and hacker houses, including the Breakpoint conference.
- Social Recognition: 100+ GitHub followers, 1,000+ followers on X (formerly Twitter).

SKILLS

Languages	TypeScript, JavaScript, Rust, Python, C, Prompting
Blockchain	Solana, Anchor, @solana/web3.js, Solana Actions & Blinks, Solana Agent Kit
Frontend	NextJS, React, Tailwind CSS
Backend	NodeJS, Express, Prisma ORM, PostgreSQL, MySQL
Tools & Infra	Git, Langchain, Pusher, Helius gRPC/RPC, Jito, Jupiter API, MagicEden API
